A Corpus-Based Study of Nominalizations Predicated by English Deverbal Nouns in -tion
Contents

Acknowledgements 13

Introduction 15

Chapter 1—Theoretical orientation 19
1.1. Introduction 19
1.2. Language as a mental phenomenon 20
1.3. The autonomy of the language faculty 21
1.4. The modularity of the language faculty 22
1.5. The issue of syntagmatic combination 23
1.6. A repository of symbolic units 24
1.7. The individuation of symbolic units 26
1.8. Semantic representations 27
1.9. The characterization of grammatical categories 30
1.10. Grammatical valence relations 34
1.11. Cognitive grammar accounts of nominalization 37
1.12. The category of deverbal nouns in -tion: a preliminary characterization 46
1.12.1. The semantic pole of the nominalizing morpheme -tion as a dependent predication 47
1.12.2. The polysemous character of English deverbal nouns in -tion 49
1.12.3. The characterization of the internal structure of the category comprising deverbal nouns in -tion in terms of a schematic network model 51
1.13. Summary 53

Chapter 2—A schematic characterization of the processes predicated by the verbs motivating English deverbal nouns in -tion 55
2.1. Introduction 55
2.2. Diversity in the make up of processual domain matrices 56
2.3. Characterization of processes relative to the canonical event model 59
2.3.1. Characterization of processual participants relative to semantic role archetypes 61
2.3.2. Variation in the number of participants comprised by a processual scope of predication 65
2.3.3. Diversity in the degree of conceptual prominence conferred on processual participants 66
2.4. A survey of the schemas subsuming the processes motivating the investigated nominalizations 68
2.4.1. The \([CT]-[TH]\) schema 69
2.4.1.1. Instantiations of the schema and their occurrence in usage events 70
2.4.1.2. Diversification of the instantiations in terms of their physicality
2.4.1.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.2. The [[CT]-[INS]-[TH]] schema
2.4.2.1. Instantiations of the schema and their occurrence in usage events
2.4.2.2. Diversification of the instantiations in terms of their physicality
2.4.2.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.3. The [[CT]-[INS]-[TH]] schema
2.4.3.1. Instantiations of the schema and their occurrence in usage events
2.4.3.2. Diversification of the instantiations in terms of their physicality
2.4.3.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.4. The [[CT]-[TH]] schema
2.4.4.1. Instantiations of the schema and their occurrence in usage events
2.4.4.2. Diversification of the instantiations in terms of their physicality
2.4.4.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.5. The [[CT]-[INS]-[TH]] schema
2.4.5.1. Instantiations of the schema and their occurrence in usage events
2.4.5.2. Diversification of the instantiations in terms of their physicality
2.4.5.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.6. The [[CT]-[PAT]-[PAT(EFF)]] schema
2.4.6.1. Instantiations of the schema and their occurrence in usage events
2.4.6.2. Diversification of the instantiations in terms of their physicality
2.4.6.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.7. The [[CT/TH]] schema
2.4.7.1. Instantiations of the schema and their occurrence in usage events
2.4.7.2. Diversification of the instantiations in terms of their physicality
2.4.7.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.8. The [[ZERO]-[EXP]] schema

6
2.4.8.1. Instantiations of the schema and their occurrence in usage events

2.4.9. The [[CT]-[TH]-[TH(GOAL)]] schema
  2.4.9.1. Instantiations of the schema and their occurrence in usage events
  2.4.9.2. Diversification of the instantiations in terms of their physicality
  2.4.9.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.10. The [[CT]-[PAT]-[PAT(EFF)]] schema
  2.4.10.1. Instantiations of the schema and their occurrence in usage events
  2.4.10.2. Diversification of the instantiations in terms of their physicality
  2.4.10.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.11. The [[AG]-[MVR]] schema
  2.4.11.1. Instantiations of the schema and their occurrence in usage events
  2.4.11.2. Diversification of the instantiations in terms of their physicality
  2.4.11.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.12. The [[CT]-[MVR]-[TH(RECIPIENT)]] schema
  2.4.12.1. Instantiations of the schema and their occurrence in usage events
  2.4.12.2. Diversification of the instantiations in terms of their physicality
  2.4.12.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.13. The [[EXP]-[ZERO1]-[ZERO2]] schema
  2.4.13.1. Instantiations of the schema and their occurrence in usage events

2.4.14. The [[CT/MVR]-[ZERO]] schema
  2.4.14.1. Instantiations of the schema and their occurrence in usage events
  2.4.14.2. Diversification of the instantiations in terms of their physicality
  2.4.14.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.15. The [[CT/TH1]-[CT/TH2]] schema
  2.4.15.1. Instantiations of the schema and their occurrence in usage events
  2.4.15.2. Diversification of the instantiations in terms of their physicality
  2.4.15.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants
2.4.16. The \([[\text{CT}]-[\text{TH}]-[\text{TH(SOURCE)}]]\) schema

2.4.16.1. Instantiations of the schema and their occurrence in usage events

2.4.16.2. Diversification of the instantiations in terms of their physicality

2.4.16.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.17. The \([[\text{CT}]-[\text{PAT1}]-[\text{PAT2}]-[\text{PAT(EFF)}]]\) schema

2.4.17.1. Instantiations of the schema and their occurrence in usage events

2.4.17.2. Diversification of the instantiations in terms of their physicality

2.4.17.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.18. The \([[\text{CT}]-[\text{MYR}]-[\text{TH(SOURCE)}]-[\text{TH(GOAL)}]]\) schema

2.4.18.1. Instantiations of the schema and their occurrence in usage events

2.4.18.2. Diversification of the instantiations in terms of their physicality

2.4.18.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.19. The \([[\text{CT}]-[\text{TH}]-[\text{ZERO}]]\) schema

2.4.19.1. Instantiations of the schema and their occurrence in usage events

2.4.19.2. Diversification of the instantiations in terms of their physicality

2.4.19.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.20. The \([[\text{CT}/\text{TH}](\text{M})]]\) schema

2.4.20.1. Instantiations of the schema and their occurrence in usage events

2.4.20.2. Diversification of the instantiations in terms of their physicality

2.4.20.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.21. The \([[\text{CT}/\text{MYR}]-[\text{TH(SOURCE)}]-[\text{TH(GOAL)}]]\) schema

2.4.21.1. Instantiations of the schema and their occurrence in usage events

2.4.21.2. Diversification of the instantiations in terms of their physicality

2.4.21.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.22. The \([[\text{CT}/\text{PAT}]-[\text{PAT(EFF)}]]\) schema

2.4.22.1. Instantiations of the schema and their occurrence in usage events

2.4.22.2. Diversification of the instantiations in terms of their physicality
2.4.22.3. Diversification of the instantiations in terms of the role archetype makeup of their processual participants

2.4.23. The remaining processes motivating the nominalizations included in the scope of the study

2.5. Perfectivity of the processes motivating the nominalizations included in the scope of the study

2.6. Summary

Chapter 3—A schematic characterization of nominalizations predicated by English deverbal nouns in -tion

3.1. Introduction

3.2. A survey of nominalization kinds predicated by English deverbal nouns in -tion

3.2.1. Substance nominalizations

3.2.1.1. The bottommost instantiations of the mid-level substance nominalization schema and their occurrence in usage events

3.2.1.2. The internal structure of the mid-level substance nominalization schema

3.2.1.3. Low-level substance nominalization subschemas

3.2.1.4. The overlap among the sets of predications elaborating low-level substance nominalization subschemas

3.2.1.5. A schematic network model of the category comprising substance nominalizations

3.2.1.6. Grammatical properties of substance nominalizations

3.2.2. Episodic nominalizations

3.2.2.1. The bottommost instantiations of the mid-level episodic nominalization schema and their occurrence in usage events

3.2.2.2. The internal structure of the mid-level episodic nominalization schema

3.2.2.3. Low-level episodic nominalization subschemas

3.2.2.4. The overlap among the sets of predications elaborating low-level episodic nominalization subschemas

3.2.2.5. A schematic network model of the category comprising episodic nominalizations

3.2.2.6. Grammatical properties of episodic nominalizations

3.2.3. Landmark nominalizations

3.2.3.1. The bottommost instantiations of the mid-level landmark nominalization schema and their occurrence in usage events

3.2.3.2. The internal structure of the mid-level landmark nominalization schema

3.2.3.3. Low-level landmark nominalization subschemas

3.2.3.4. The overlap among the sets of predications elaborating low-level landmark nominalization subschemas
3.2.3.5. A schematic network model of the category comprising landmark nominalizations 191
3.2.3.6. Grammatical properties of landmark nominalizations 192
3.2.3.7. Characterization of landmark nominalizations relative to role archetypes 194

3.2.4. Change nominalizations 194
3.2.4.1. The bottommost instantiations of the mid-level change nominalization schema and their occurrence in usage events 194
3.2.4.2. The internal structure of the mid-level change nominalization schema 195
3.2.4.3. Lower mid-level and low-level change nominalization subschemas 197
3.2.4.4. The overlap among the sets of predications elaborating low-level change nominalization subschemas 200
3.2.4.5. A schematic network model of the category comprising change nominalizations 201
3.2.4.6. Grammatical properties of change nominalizations 206

3.2.5. Secondary landmark nominalizations 206
3.2.5.1. The bottommost instantiations of the mid-level secondary landmark nominalization schema and their occurrence in usage events 206
3.2.5.2. The internal structure of the mid-level secondary landmark nominalization schema 207
3.2.5.3. Low-level secondary landmark nominalization subschemas 209
3.2.5.4. The overlap among the sets of predications elaborating low-level secondary landmark nominalization subschemas 211
3.2.5.5. A schematic network model of the category comprising secondary landmark nominalizations 212
3.2.5.6. Grammatical properties of secondary landmark nominalizations 213
3.2.5.7. Characterization of secondary landmark nominalizations relative to role archetypes 214

3.2.6. Trajector nominalizations 216
3.2.6.1. The bottommost instantiations of the mid-level trajector nominalization schema and their occurrence in usage events 216
3.2.6.2. The internal structure of the mid-level trajector nominalization schema 216
3.2.6.3. Low-level trajector nominalization subschemas 218
3.2.6.4. The overlap among the sets of predications elaborating low-level trajector nominalization subschemas 220
3.2.6.5. A schematic network model of the category comprising trajector nominalizations 221
3.2.6.6. Grammatical properties of trajector nominalizations 222
3.2.6.7. Characterization of trajector nominalizations relative to role archetypes 223

3.2.7. Magnitude nominalizations

3.2.7.1. The bottommost instantiations of the mid-level magnitude nominalization schema and their occurrence in usage events 224
3.2.7.2. The internal structure of the mid-level magnitude nominalization schema 225
3.2.7.3. Low-level magnitude nominalization subschemas 227
3.2.7.4. The overlap among the sets of predications elaborating low-level magnitude nominalization subschemas 230
3.2.7.5. A schematic network model of the category comprising magnitude nominalizations 231
3.2.7.6. Grammatical properties of magnitude nominalizations 233

3.2.8. Process nominalizations

3.2.8.1. The bottommost instantiations of the mid-level process nominalization schema and their occurrence in usage events 234
3.2.8.2. The internal structure of the mid-level process nominalization schema 234
3.2.8.3. Low-level process nominalization subschemas 236
3.2.8.4. The overlap among the sets of predications elaborating low-level process nominalization subschemas 237
3.2.8.5. A schematic network model of the category comprising process nominalizations 237
3.2.8.6. Grammatical properties of process nominalizations 238

3.2.9. Qualitative nominalizations

3.2.9.1. The bottommost instantiations of the mid-level qualitative nominalization schema and their occurrence in usage events 239
3.2.9.2. The internal structure of the mid-level qualitative nominalization schema 240
3.2.9.3. Low-level qualitative nominalization subschemas 242
3.2.9.4. The overlap among the sets of predications elaborating low-level qualitative nominalization subschemas 245
3.2.9.5. A schematic network model of the category comprising qualitative nominalizations 245
3.2.9.6. Grammatical properties of qualitative nominalizations 247

3.2.10. Ability nominalizations

3.2.10.1. The bottommost instantiations of the mid-level ability nominalization schema and their occurrence in usage events 248
3.2.10.2. The internal structure of the mid-level ability nominalization schema 248
3.2.10.3. Low-level ability nominalization subschemas 250
3.2.10.4. *The overlap among the sets of predications elaborating low-level ability nominalization subschemas* 251
3.2.10.5. *A schematic network model of the category comprising ability nominalizations* 251
3.2.10.6. *Grammatical properties of ability nominalizations* 252

3.3. A schematic network model of the category comprising the deverbal nouns in *-tion* included in the scope of the study 254
3.3.1. *The types of nodes featured by the schematic network model* 254
3.3.2. *The geometry of the schematic network model* 256
3.3.3. *The schematic network model as a characterization of the nominalizing morpheme *-tion* 258

3.4. Summary 259

Conclusion 261
